The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activitics such as: Immune system suppression, Activiny, inhibin activity, chemotactic/chemokinetic activity, hamostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 specification.

CC PRO polypeptides, to link bioactive molecules to cells expressing CC PRO polypeptides, to modulate biological activities of cells expressing CC PRO polypeptides, and to detect the presence of mammalian lung, colon, CC breast, prostate, rectal, cervical or liver tumours by comparing PRO CC polypeptide expression in a cell sample to that in a control sample. CC Some of the 275 sequences are also useful to stimulate the release of CC tumour necrosis factor-alpha (TNF-alpha) from human blood, the CC proliferation or differentiation of chondrocytes, the proliferation or CC gene expression in pericyte cells, the release of proteoglycans from CC artilage, the proliferation of inner ear utricular supporting cells or CC of T-lymphocytes, the release of a cytokine from peripheral blood CC monocytes (PBMCS), or the proliferation of endothelial cells. Some of CC the PRO polypeptides may modulate glucose or free fatty acid uptake by Skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide CC to factor VIIA. The PRO polypeptides can be used in assays to identify CC molecules involved in binding interactions. The polymucleotides encoding CC PRO polypeptides can be used to generate probes, antisense RNA/DNA, CC transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 44.4%; Score 1656.5; DB 22; Lengt Best Local Similarity 47.2%; Pred. A;Title: Organization and chromosomal localization of the gene encoding the A;Reference number: JC6128; MUID:96413591
A;Accession: JC6128
A;Accession: JC6128
A;Kolecule type: DNA
A;Residues: 1-603 <BOLY
A;Cross-references: GB:U66900; NID:g1621612; PIDN:AAB17270.1; PID:g1621613
C;Comment: This protein is a serum protein and it is of the ternary complex A;Map position: 17
RESULT 13
B36665
Slit protein 2 precursor - fruit fly (Drosophila melanogaster)
C;Species: Drosophila melanogaster or;Date: 30-Apr-1991 #text_change 19-
C;Apte: 30-Apr-1991 #sequence_revision 30-Apr-1991 #text_change 19-
C;Accession: B36665

platelet membrane

protein

S

substrate

```
C;Comment: The amino end of the intact protein is blocked.
C;Comment: This protein is absent in Bernard-Soulier syndrome.
C;Genetics:
A;Gene: GDB:GP5
A;Gene: GDB:GDB:230236; OMIM:173511
A;Map position: Spter-Sqter
C;Superfamily: leucine-rich alpha-2-glycoprotein repeat homology

"Molecular cloning of mouse Toll-like receptor 3 cDNA.";

"Molecular cloning of mouse Toll-like receptor 3 cDNA.";

Submitted (FEB-2001) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: participates in the innate immune response to ragents. May be involved in the recognition of ds-RNA. Act

MyD88 and TRAF6, leading to NF-kappa-B activation, cytok.

secretion and the inflammatory response (By similarity).

-!- SUBUNIT: Binds MyD88 via their respective TIR domains (B:
